

MOVEit™ Automation

Easy and Reliable File-Based Automation

MOVEit AUTOMATION ENABLES

Anyone on the IT team to easily automate file transfer tasks without programming.

Business analysts with appropriate authorization to monitor, schedule and run automated file transfer tasks.

Management and auditability of business transactions.

Web-based automation from any platform or device from anywhere.

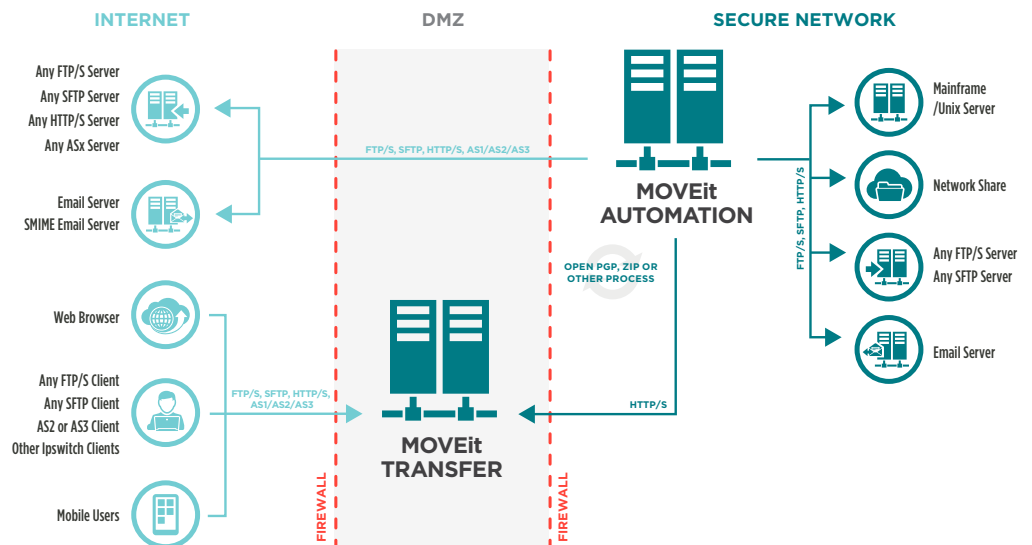

Securely transferring data and files as part of business transactions is the lifeblood of any organization, but often the applications and processes that support them are less than ideal. In many organizations some recurring tasks are still performed manually, and those that are automated depend on unreliable custom scripts that can fail at any time and are costly or difficult to manage. The result is an unpredictable and insecure set of business processes.

Easily Automate Your File-Based Tasks

MOVEit Automation provides a powerful web user interface for automating file transfers and managing business transactions. It improves data protection by automating transfer of files and controlling external access to trusted networks. Push and pull files to/from any FTP server or shared network drive based on events or schedule, or manage files for transfer, storage or deletion with MOVEit Automation. MOVEit Automation successfully automates millions of mission-critical data transfers across industries including banking/finance, healthcare and government.

The Industry's Most Secure File Transfer Automation

Now you can rest assured that your organization's most critical and sensitive data is completely secure. With powerful enterprise-class security features – guaranteed delivery, FIPS 140-2 validated cryptography, OpenPGP, and fine-grained access control – MOVEit Automation delivers the security enterprise organizations need for secure data transfers. These best-in-class security capabilities help your organization comply with corporate, industry, and government regulations such as Basel I/II/III, FIPS, FISMA, GLBA, HIPAA, PCI DSS, and Sarbanes-Oxley.

FILE TRANSFER PROTOCOL

- > FTP
- > SSL / FTPS
- > SSH / SFTP
- > HTTP/S
- > SMTP / POP 3
- > CIFS / SMB (Accessing Network Storage)
- > EDIINT AS1, AS2 & AS3

ADMINISTRATION

- > Web-based Administration
- > Delegate Permissions (Host/Tasks, Groups/Users)
- > Unlimited Simultaneous Local/Remote Users
- > No restriction on number of hosts
- > Support for MySQL and SQL Server – MySQL included at no additional cost

SECURITY

- > Transport Encryption (“Data-in-Transit”)
- > FIPS 140-2 Validated Cryptography
- > Encrypted Administrative Access
- > File Integrity Checking
- > Guaranteed Delivery
- > Anti-Virus Solution Integration (McAfee, Symantec & Trend Micro)
- > Cryptographic Tamper-Evident Logging
- > OpenPGP File Encryption
- > Limit user access: view only, run tasks, or configure tasks

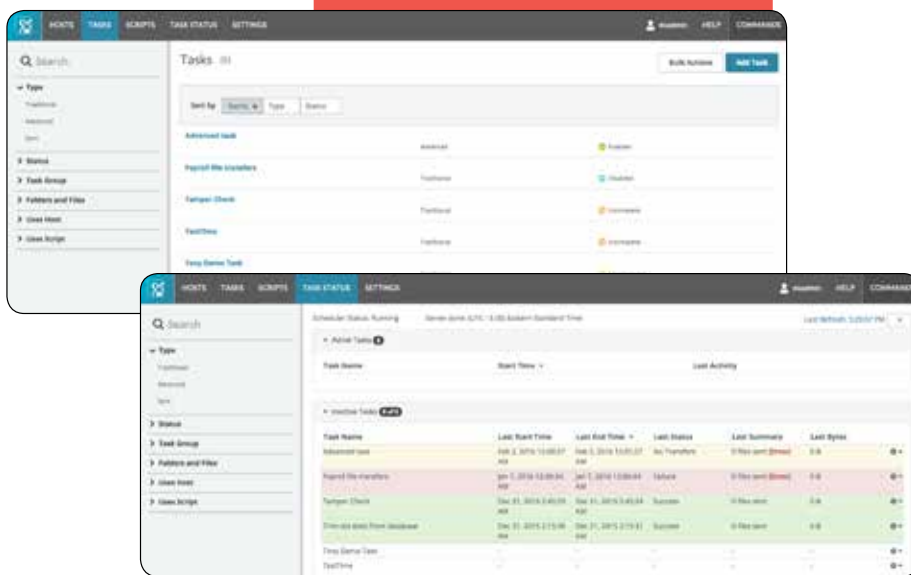

HIGH AVAILABILITY

- > Automatic Checkpoint Restart
- > Alternate Host with Automatic Rollover
- > Automatic Failover Node License

AUTOMATION & PRODUCTIVITY

- > Up to 5,000 pre-configured tasks
- > Up to 100 simultaneously run tasks
- > Easily Manage Complex Workflows and Implement Granular Rules
- > Task Builder – “Click Together” up to Thousands of Tasks
- > Run Processes on a Scheduled, Event-Driven & On-Demand Basis
- > Multiple Tasks Can Be Run Together Simultaneously
- > “Pull, Process & Push” Files Among all Platforms/ Architectures/OS’s
- > Synchronization of Files and Folders on Different Systems
- > Advanced Tasks with Conditional Logic
- > Custom Scripting
- > API for Custom Programming
- > Business users can monitor, schedule and run tasks
- > Align group tasks to business processes or hosts

Web-based automation with MOVEit Auto-

Any authorized user can view task status

Automate Your Most Complex File Transfer Processes

One way to improve productivity is to reduce the extensive effort related to managing your organization’s file transfer processes. MOVEit Automation integrates directly into your existing file transfer workflows, essentially becoming the Automation hub for all file transfer processes. It automatically “pulls, processes, and pushes” all files to any platform, including network architectures, operating systems, and protocols.

With MOVEit Automation, administrators can automate, simplify, and monitor file transfer processes without any manual effort – critical steps in improving governance processes. For example, IT administrators can simply “click together” hundreds or thousands of simultaneous, event-driven, scheduled, and on-demand tasks. They can automate business processes, rules, and logic, or choose to remotely configure, monitor, and control tasks.

Advanced Tasks with Conditional Logic

Administrators can also easily manage complex, multi-step logic-based workflows and implement elaborate, logical, and detailed rules – all with no scripting or programming required. For example, administrators can efficiently define what files to move, where to find them, security measures, and when to send them, or they can add customized logical “If, Then, Else, And, Or” conditions into existing file transfer task execution.

MOVEit Automation is the industry’s most flexible file transfer workflow solution. It is quick and easy to deploy with typical deployments measured in days – not months – and without the need for costly professional services. MOVEit Automation is standards-based and integrates easily with your existing infrastructure. Enterprise organizations can also deploy MOVEit Automation across distributed architectures. It even offers high availability with built-in failover, full integration with SQL Server and supports virtualization servers running on VMWare ESX and Microsoft Hyper-V.
